PROFILE

Final-year cybersecurity engineering student at TEK-UP, developing information security skills through internships and academic projects. My work focuses on SOC monitoring, incident response automation, application security and the integration of security controls into DevSecOps pipelines.

CORE SKILLS

SOC & Detection
Wazuh, TheHive, Cortex, MISP, Shuffle, n8n, Suricata, Zeek, MITRE ATT&CK;, log analysis

Network Security
OPNsense, ZeroTier, MPLS, WAN/LAN/DMZ, TCP/IP, DNS

Application Security
JWT, RBAC, API security, HTTPS/TLS, input validation, OWASP Top 10

SECURITY HIGHLIGHTS

• **SOC integration:** connected detection, investigation, threat intelligence and response tools in a segmented multi-site architecture at Tunisie Telecom.

• **Detection validation:** tested four controlled attack scenarios and mapped detections to MITRE ATT&CK.

• **TEK-UP cybersecurity challenge:** built a **20-VM banking SOC lab** with integrated monitoring, threat intelligence and investigation workflows.

• **Secure development:** applied authentication, encrypted communications, request logging and server-side validation across web projects.

INTERNSHIP EXPERIENCE

Tunisie Telecom

Cybersecurity Intern - SOC & Automation

January - May 2025 | Tunis, Tunisia

• Integrated Wazuh, TheHive, Cortex, MISP and n8n to support detection, alert enrichment, investigation and response across a segmented multi-site architecture.

• Built a Python IDS using Scapy, Flask and Scikit-learn for traffic inspection and classification, IP blocking, and Telegram/email notifications.

• Designed Claude/Groq SOC agents and automated analysis, enrichment and response actions, including firewall blocking, EDR isolation and Active Directory account response.

• Validated detections against Nmap reconnaissance, ICMP flooding, brute force and malicious traffic in controlled scenarios; mapped them to MITRE ATT&CK.

Deaf Square

Web, AI & Security Design Intern | TuniSign

June - September 2026

• Defined **application security requirements** for TuniSign, a Tunisian sign-language learning platform, covering authentication, authorization, password protection and input validation.

• Specified **JWT authentication, role-based access control and BCrypt password hashing** to protect user access and credentials.

• Documented **input validation and OWASP-aligned safeguards** within the platform design, alongside a MediaPipe/ML pipeline for webcam-based gesture analysis.

Innovant Studio

Final-year Intern - Full-stack & AI

2024 | 2 months | Two-person project

• Secured Audit-X access and communications with JWT and HTTPS; added Morgan request logging and tested REST APIs using Postman.

• Co-developed a React, Node.js/Express and MongoDB accessibility platform, with authentication, profiles, file handling and Arabic-to-Braille/audio conversion using SeamlessM4T.

TECHNICAL TOOLKIT

Security Testing
Nmap, Gobuster, Burp Suite, Metasploit; SQL injection, XSS, LFI/RFI

Programming
Python, JavaScript, Node.js, Bash, C/C++, PHP/Symfony

AI & Frameworks
Scikit-learn, Claude, Groq, LLaMA, OpenAI, Flask, FastAPI, Express, WebSockets

Systems & DevOps
Linux (Kali, Ubuntu), Docker, Git, MongoDB, MySQL

DevSecOps
GitLab CI/CD, Docker, Kubernetes (k3s), Gitleaks, Semgrep, Trivy, Syft (SBOM), Cosign, Kyverno, Falco, Prometheus, Grafana.
Architecture and security control design.

CERTIFICATES

LetsDefend
SOC Analyst Learning Path
Completed 11 July 2026

Google / Coursera
Google Cybersecurity Professional Certificate
March 2026

IBM
Cybersecurity Fundamentals
February 2026

Logical Operations
Python Programming: Input, Output & String Handling
December 2025

LANGUAGES

Arabic: Native
French: Advanced
English: Advanced
Italian: Beginner

FEATURED CYBERSECURITY PROJECTS

DevSecOps Pipeline | Zero Trust Supply Chain

Academic architecture project - TEK-UP

October 2026

• Designed a **GitLab CI / Docker / k3s** pipeline architecture with planned secret, code and vulnerability checks using Gitleaks, Semgrep and Trivy.

• Specified **SBOM generation with Syft, image signing with Cosign and admission policies with Kyverno**; planned runtime monitoring with Falco and Prometheus/Grafana.

• Defined **4 validation scenarios**: exposed secret, vulnerable image, unsigned image and suspicious runtime behaviour.

Banking SOC | Threat Hunting & SIEM Lab

Cybersecurity Challenge - TEK-UP University

2024

• Built a **20-VM banking SOC environment** for a TEK-UP challenge, combining SIEM, SOAR, threat intelligence and network/endpoint monitoring.

• Connected **Wazuh, MISP, TheHive and Shuffle** into investigation workflows; correlated Suricata/Zeek network telemetry with endpoint events.

• Investigated **3 simulated attack types**: ransomware, SQL injection and brute force, using the lab to practise threat hunting and incident analysis.

• Mapped security controls to **3 frameworks**: PCI DSS, ISO 27001 and SWIFT CSP.

PromptShield | AI Security Platform

Cybersecurity project

2026

• Implemented prompt-injection detection using rules, natural-language processing and contextual analysis, with a 0-100 risk score to support triage.

• Delivered a triage dashboard and live logs using Python, FastAPI, WebSockets and OpenAI.

EDUCATION

TEK-UP University

Cybersecurity Engineering - Information Systems & Network Security

2023 - Present | Tunis, Tunisia

Higher Institute of Information and Communication Technologies

Bachelor's Degree in Computer Systems Engineering - Networks & Systems

Final project defended on 24 May 2024
