PROFILE

Cybersecurity engineering student who builds security systems that do more than detect threats - they investigate, enrich, and trigger response actions. Designed multi-site SOC architectures, connected five SIEM/SOAR and threat-intelligence platforms, and developed autonomous AI agents capable of coordinating firewall, EDR, and Active Directory actions. Combines hands-on defensive operations, offensive testing, Python development, and AI security to turn complex alerts into fast, actionable decisions.

TECHNICAL SKILLS

SOC & Detection	Wazuh, TheHive, Cortex, MISP, Shuffle, n8n, Suricata, Zeek, MITRE ATT&CK, threat hunting, log analysis
Network Security	OPNsense, ZeroTier, MPLS, WAN/LAN/DMZ segmentation, TCP/IP, DNS, HTTP/S, firewall administration
Offensive Security	Nmap, Gobuster, Burp Suite, Metasploit, SQL injection, XSS, LFI/RFI, authentication testing, OWASP Top 10
Programming & AI	Python, Node.js, JavaScript, Bash, C/C++, PHP/Symfony, Scikit-learn, Claude AI, Groq LLaMA, OpenAI
Secure Development	JWT, RBAC, API security, HTTPS/TLS, input validation, Flask, FastAPI, Express, WebSockets
Systems & DevOps	Linux (Kali, Ubuntu), Docker, Git, MongoDB, MySQL

PROFESSIONAL EXPERIENCE

Cybersecurity & AI Security Engineer - Project Experience2025-2026

- Tunisie Telecom | Tunis, Tunisia
- Designed and deployed a resilient multi-site security architecture covering WAN, LAN, and DMZ zones, supported by redundant MPLS connectivity, OPNsense firewalls, and a ZeroTier VPN overlay.
 - Defined network-segmentation and traffic-control principles to isolate exposed services, protect internal resources, and provide secure communication between distributed sites.
 - Engineered an end-to-end SOC workflow connecting five security and automation platforms - Wazuh, TheHive, Cortex, MISP, and n8n - for centralized detection, investigation, enrichment, case management, and response.
 - Developed a custom Python IDS with Flask, Scapy, and Scikit-learn to inspect network activity, classify suspicious traffic, block malicious IP addresses, and generate real-time Telegram and email notifications.
 - Designed SENTINEL + RAPTOR, an autonomous SOC agent powered by Claude AI and Groq LLaMA, to analyze alerts and support security decisions from initial triage through containment.
 - Automated a five-stage response chain covering CVE/malware scanning, threat-intelligence enrichment, firewall blocking, EDR isolation, and Active Directory account revocation.
 - Aligned detections with MITRE ATT&CK and validated the architecture through four controlled scenarios: Nmap reconnaissance, ICMP flooding, brute-force attempts, and malicious network traffic.

Full-Stack & AI Security Developer - InternJan 2024

- Innovant Studio | Tunis, Tunisia
- Designed and developed an AI-powered accessibility platform for visually impaired users, integrating SeamlessM4T for multilingual speech, audio, and text processing.
 - Contributed to the full-stack application architecture using Python, Node.js, React, and MongoDB, with particular attention to reliable and secure data exchanges.
 - Implemented four application-security controls - JWT authentication, role-based access control, input validation, and encrypted communications - to protect identities and sensitive user data flows.
- Stack: Python, Node.js, React, MongoDB

Full-Stack Developer - InternMar 2023

- Contuba | Tunis, Tunisia
- Designed and developed Symfony/PHP web applications, translating functional requirements into structured backend services and responsive user workflows.
 - Implemented secure payment transaction processing with server-side validation and controlled data exchanges between application components.
 - Strengthened API and backend resilience by applying OWASP Top 10 controls, input sanitization, authentication safeguards, and secure architecture practices.

CYBERSECURITY PROJECTS

Banking SOC - Threat Hunting & SIEM Lab2024

- Architected a 20-VM banking SOC laboratory reproducing a complete defensive environment with SIEM, SOAR, threat intelligence, endpoint monitoring, network visibility, behavioral analytics, and incident case management.
- Deployed Wazuh with UEBA capabilities to centralize security events, monitor endpoint behavior, correlate alerts, and support the investigation of anomalous activity.
- Integrated MISP, TheHive, and Shuffle to enrich indicators of compromise, structure incident investigations, and automate repetitive response tasks.
- Combined Suricata and Zeek network telemetry with endpoint data to improve visibility across simulated ransomware, SQL-injection, and brute-force scenarios.
- Mapped monitoring use cases, detections, and security controls to PCI DSS, ISO 27001, and SWIFT Customer Security Programme requirements.

Stack: Wazuh, MISP, TheHive, Shuffle, Suricata, Zeek

PromptShield - AI Security Platform2026

- Designed and developed a real-time AI security platform to identify prompt-injection attempts before malicious instructions could influence downstream model behavior.
- Implemented a multi-layer detection engine combining security rules, natural-language processing, and contextual analysis to evaluate suspicious prompt patterns.
- Built a 0-100 risk-scoring mechanism to translate detection signals into clear severity levels and support consistent analyst prioritization.
- Delivered live WebSocket log streaming and a SOC-oriented dashboard for continuous monitoring, rapid triage, and investigation of suspicious prompts.

Stack: FastAPI, Python, WebSockets, OpenAI

ChainTrust - Blockchain Credential Verification2025

- Designed and developed a blockchain-based platform for issuing and verifying academic and professional credentials through tamper-resistant records.
- Implemented an immutable verification workflow to protect record integrity, simplify authenticity checks, and reduce dependence on manual certificate validation.
- Applied secure-authentication and transparency principles to provide trusted access to credential information while preserving data reliability.

Stack: Blockchain, immutable records, authentication, data security

CERTIFICATIONS

Google Cybersecurity Professional CertificateMar 2026

Google / Coursera | Credential ID: 06U04D00RFHU

IBM Cybersecurity FundamentalsFeb 2026

IBM | Credential ID: PLAN-4FB8400F05FC

Python Programming: Input, Output & String HandlingDec 2025

Logical Operations | Credential ID: 32ME1BXR0B0L

EDUCATION

Cybersecurity Engineering - Information Systems & Network Security2023-Present

TEK-UP University of Digital Sciences, Tunis

Degree in Computer Systems EngineeringMar 2024

Higher Institute of Information and Communication Technologies, Tunis

Baccalaureate in Computer Science - HonorsJun 2021

Mourouj 4 School, Tunis

LANGUAGES

Arabic: Native | English: Advanced | French: Advanced | Italian: Beginner

SOFT SKILLS

Analytical thinking | Incident-response mindset | Problem solving | Adaptability | Teamwork
